

Operációs rendszerek BSc

9.gyak.

2022. 04.10.

Készítette:

Szabó Alen Bsc

Progterv. info.

MX6WLR

Miskolc, 2022

1.Feladat:

```
int main()
{
    int fd, ret;
    char buf[32];

    buf[0]=0;

    fd=open("mx6wlr.txt",O_RDWR);

    if(fd == -1){
        perror("open() hiba!");
        exit(-1);
    }

    ret = read(fd,buf,32); //ret:mennyit sikerült kiolvasni
    printf("read() ovalsott %d byteot, ami a kovetkezo %s\n",ret,buf);
    strcpy(buf,"MX6WLR;Szabo Alen;Programtervezo Info");

    ret=lseek(fd,0,SEEK_SET);
    printf("lseek() mondja: %d\n",ret);

    ret=write(fd,buf,25);
    printf("write() mondja %d\n",ret);

    close(fd);

    return 0;
}
```

2.Feladat:

```
void handlesignals(int signum);

int main(void)
{
    void (*sigHandlerInterrupt)(int);
    void (*sigHandlerQuit)(int);
    void (*sigHandlerReturn)(int);
    sigHandlerInterrupt = sigHandlerQuit = handlesignals;
    sigHandlerReturn = signal(SIGINT, sigHandlerInterrupt);
    if(sigHandlerReturn == SIG_ERR){
        perror("signal error: ");
        return 1;
    }
    sigHandlerReturn = signal(SIGQUIT, sigHandlerQuit);

    if(sigHandlerReturn == SIG_ERR){
        perror("signal error: ");
        return 1;
    }
    while(1){
        printf("\nA program leallitasahoz a kovetkezo ket vegezze el: \n");
        printf("1. Nyisson meg egy masik terminalt.\n");
        printf("2. Adj a parancsot: kill %d or issue CTRL+C 2 times \n", getpid());
        sleep(10);
    }

    return 0;
}
```

3.Feladat:

SJF	p1	p2	p3	p4
Érkezés	0	0	2	5
CPU idő	24	3	6	3
Indulás	12	0	3	9
Befejezés	36	3	9	12
Várakoz	12	0	1	4

The Gantt chart illustrates the execution sequence for Shortest Job First (SJF) scheduling:

- p1** starts at time 0 and runs until time 24.
- p2** starts at time 0 and runs until time 3.
- p3** starts at time 2 and runs until time 9.
- p4** starts at time 3 and runs until time 12.

The chart also indicates waiting periods (Várakozás) for each process, represented by gaps in their execution timelines.
